Climate Change negatively impacts all earth's people. As our planet warms up, our natural environment is affected - power and transportation, agriculture, all of which will of course, negatively impact our safety and health.

Secretary-General addresses the opening of the twenty-first session of the Conference of Parties (COP21) in Paris, November 30, 2015

UN Photo/ Rick Bajornas

"By making choices that reduce greenhouse gas pollution, and preparing for the changes that are already underway, we can reduce risks from climate change. Our decisions today will shape the world our children and grandchildren will live in."

The various things we can individually do to reduce greenhouse emissions and dangers affiliated to climate change abound. On the positive side, some of the actions can also reduce expenses, as well as improve our health. These include choosing to ride a bike or walk, rather than drive a car where you can, be involved in clean energy programs, support energy efficiency at whatever level, learn all you can on the issue of climate change, educate others and basically, do all you can to help preserve our earth.

Our decisions today will shape the world our children and grandchildren will live in.
